DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 7, 13-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Oosawa et al (6,597,191).

7. An integrated circuit (Fig. 1), comprising:

an analog block (120); and

a digital block (110) coupled to the analog block; and

wherein a designated signal (141, col. 4, lines 56-59) for the analog block is utilized for indicating entry of the digital block into a scan mode (test mode, col. 6, lines 9-21); and

wherein operations of the analog block and digital block are generally independent from each other in the scan mode (the block are independent by switches 172 & 171).

- 1, 13 & 14. the apparatus described above is applicable to the method claims.

Allowable Subject Matter

3. Claims 2-6, 8-12, 15-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tomari et al (US 2004/0095182) discloses a circuit having analog circuit, digital circuit, and a common input pin between analog circuit and digital circuit.
